

Replication Code for “ENERGY MARKETS REFORMS AND RENEWABLE ENERGY IN AFRICA: Do Public-Private Partnerships Matter?”

Kwamivi Mawuli GOMADO and Amandine Laré

Submitted to *Energy Economics*

Overview

This replication package includes data and Stata code (**version 19.5; it may not work with older versions**) to replicate all tables and figures presented in the article “ENERGY MARKETS REFORMS AND RENEWABLE ENERGY IN AFRICA: Do Public-Private Partnerships Matter?”, submitted to *Energy Economics*.

Package Contents

The replication package includes the following files:

- **1 dataset:**
 - MAIN (in `datasets` folder)
- **do-file:**
 - `programs` (in `code` folder)

Replication Instructions

To replicate the results, users should follow these steps:

1. **Install required packages:** Install all necessary Stata packages marked in comments at the beginning of the do-file.
2. **Set the working directory:** Modify the path in `global homedir " "` to match your local directory structure.
3. **Execute the code:** Due to the defined macros, users must select the entire code and execute it all at once (do not run line-by-line).
4. **Access results:** All results are saved in the `tables` and `figures` folders.
 - **Table A1** can be copied directly from the Stata output.
 - **Table A4** can be manually reconstructed using the files `TableA4a.xls` and `TableA4b.xls`.
5. **Quick review (optional):** $\LaTeX$ users can compile the file `tables_figures_compiled.tex` (in `latex` folder) for a quick overview of all tables and figures.
